URBAN DUCK

WORKING CLASS LUXURY · WEBSITE & IT GAMEPLAN · OCTOBER 2026

The short version: we're moving everything off GoDaddy. The domains and email go to **Squarespace**, the new website is built by Leland and hosted **free on GitHub**, and checkout runs through **Stripe**, which only charges when something sells. The site will handle both **wholesale and retail**.

WHY WE'RE SWITCHING

	Today (GoDaddy)	New setup
Website	Websites + Marketing Commerce, billed twice for urbanduckapparel.com	Custom site on GitHub Pages: **free**
Checkout	GoDaddy's built-in commerce plan	Stripe: no monthly fee, a small fee per sale
Email	3 Microsoft 365 mailboxes plus extras	Google Workspace (Gmail) through Squarespace, ideally 1 paid user
Domains	GoDaddy, plus add-on "protection" charges	Squarespace Domains: yearly renewal only
Stock counts	None	Supabase database: **free**
Roughly	About $100 a month + $50 a year	One email user + two domain renewals

Exact Google Workspace and domain prices are whatever Squarespace lists when you sign up.

WHO OWNS WHAT

You own and pay for every account. Leland is added as a user with his own login, so nobody shares passwords and you can never be locked out of your own business.

Account	Owner	Leland
Squarespace (domains + email billing)	You	Added as a manager, or through a shared password vault
Google Workspace (email)	You, as main admin	Second admin, to fix email and reset passwords
Stripe (payments, payouts to your bank)	You	Team member; never handles bank details
Supabase (stock database)	You	Invited as Administrator
GitHub (website code)	Leland	You're added, so you always have access

Turn on two-step login on your phone for every account, and keep the backup codes in a shared password manager such as Bitwarden or 1Password.

THIS WEEK: LEAVING GODADDY (DEADLINE OCT 24)

The trendsetprotraders.com domain and the adoss@ mailbox renew on **Oct 24**. The orders@ mailbox and a website plan renew on **Oct 28**. One rule: **nothing gets cancelled until its replacement is working.**

1. **Save the DNS settings.** Leland copies every DNS record for both domains, especially the email ones.
2. **Save the old site.** Keep any text, photos or product info worth reusing from the GoDaddy site.
3. **Set up Google Workspace** through Squarespace and create the addresses in the email plan below.
4. **Move the mail.** Google's migration tool copies old Microsoft 365 email into Gmail.
5. **Transfer both domains** to Squarespace: unlock them in GoDaddy and get the transfer codes. This takes about 5–7 days.
6. **Cancel GoDaddy** one item at a time, once email and domains are working. Turn off auto-renew on everything.

If the email move isn't done by Oct 24, renew those items for the shortest term GoDaddy offers rather than risk losing mail.

BUILDING THE SITE

Stage	What happens	What you'll get
1 Brand	Logos, colors, fonts, style sample page	A link to approve or request changes. **Ready now.**
2 Site	Home, shop, product, wholesale and Our Story pages	A working preview link for your phone
3 Checkout	Cart and Stripe checkout, tested with test cards	A test order in your Stripe dashboard
4 Stock	Live stock counts, Sold Out / Only 2 left, admin page	A page where you update quantities
5 Polish	Final photos, copy, prices, policies, search setup	A site ready to launch
6 Launch	urbanduckapparel.com points to the new site; Stripe goes live	Your first real online order

WHAT WE NEED FROM YOU

- Real product photos: every item, in every color.
- Which catalog items actually exist, with exact names, colors and sizes. The catalog draft has a few typos.
- Retail and wholesale prices, how to charge shipping, and the return policy. These can wait until Stage 3.
- A Stripe account in the business name, connected to the business bank account.
- A free Supabase account, with Leland invited.
- The exact legal business name (for Stripe and the site footer), and whether "Est. 2024" is right.

EMAIL BEST PRACTICES (GMAIL / GOOGLE WORKSPACE)

Pay for people, not addresses. In Google Workspace, each paid user is a person who logs in. Addresses like orders@ and support@ don't need their own paid accounts. Make them free **groups** that deliver to the right inbox.

One account can cover both domains. Make urbanduckapparel.com the main domain and add trendsetprotraders.com as a secondary domain in the same Workspace, at no extra cost. One login, one bill, both domains.

Address	Type	Delivers to	Used for
adoss@trendsetprotraders.com	**Paid user** (you)	Your inbox	You personally
orders@trendsetprotraders.com	Group (free)	You	Wholesale and retail orders
support@urbanduckapparel.com	Group (free)	You (+ Leland if you like)	Customers; shown on the site and receipts
support@trendsetprotraders.com	Group or alias (free)	You	Company-side support
tspt@urbanduckapparel.com	Alias (free) or retire	You	Keep only if people still use it

This is a proposal. Confirm which addresses you actually use.

- **Reply from the right address.** Use Gmail's "Send mail as" so replies to customers come from support@, not your personal address.
- **Labels and filters.** Auto-label mail by the address it was sent to (Orders, Support, Wholesale) so nothing gets buried.
- **Templates.** Save ready-made replies for common questions: order status, wholesale pricing, returns.
- **Grow without paying more.** When you hire help, add them to the orders@ or support@ group. Customers keep using the same address.
- **Never run the business from a personal @gmail.com.** Keep everything on your own domains so it looks professional and stays yours.
- **Security.** Two-step login on every account, a recovery phone and email set, and Leland as a backup admin.
- **Don't land in spam.** Leland adds the SPF, DKIM and DMARC records at Squarespace so your mail reaches inboxes.
- **Files.** Keep catalogs, price sheets and photos in a Google Shared Drive owned by the business, not in a personal folder.
